

About

This fitness app's main purpose is to help bike owners keep track of their bikes' maintenance intervals and make sure they're in good condition. The app has three sections: Bikes, Rides and Settings. Owners of bicycles will be able to:

- Define multiple bikes and customize them based on type, color, and other characteristics.
- Record rides for each individual bike and view total rides statistics.
- Receive alerts before a service interval is due based on user settings.

FLOW

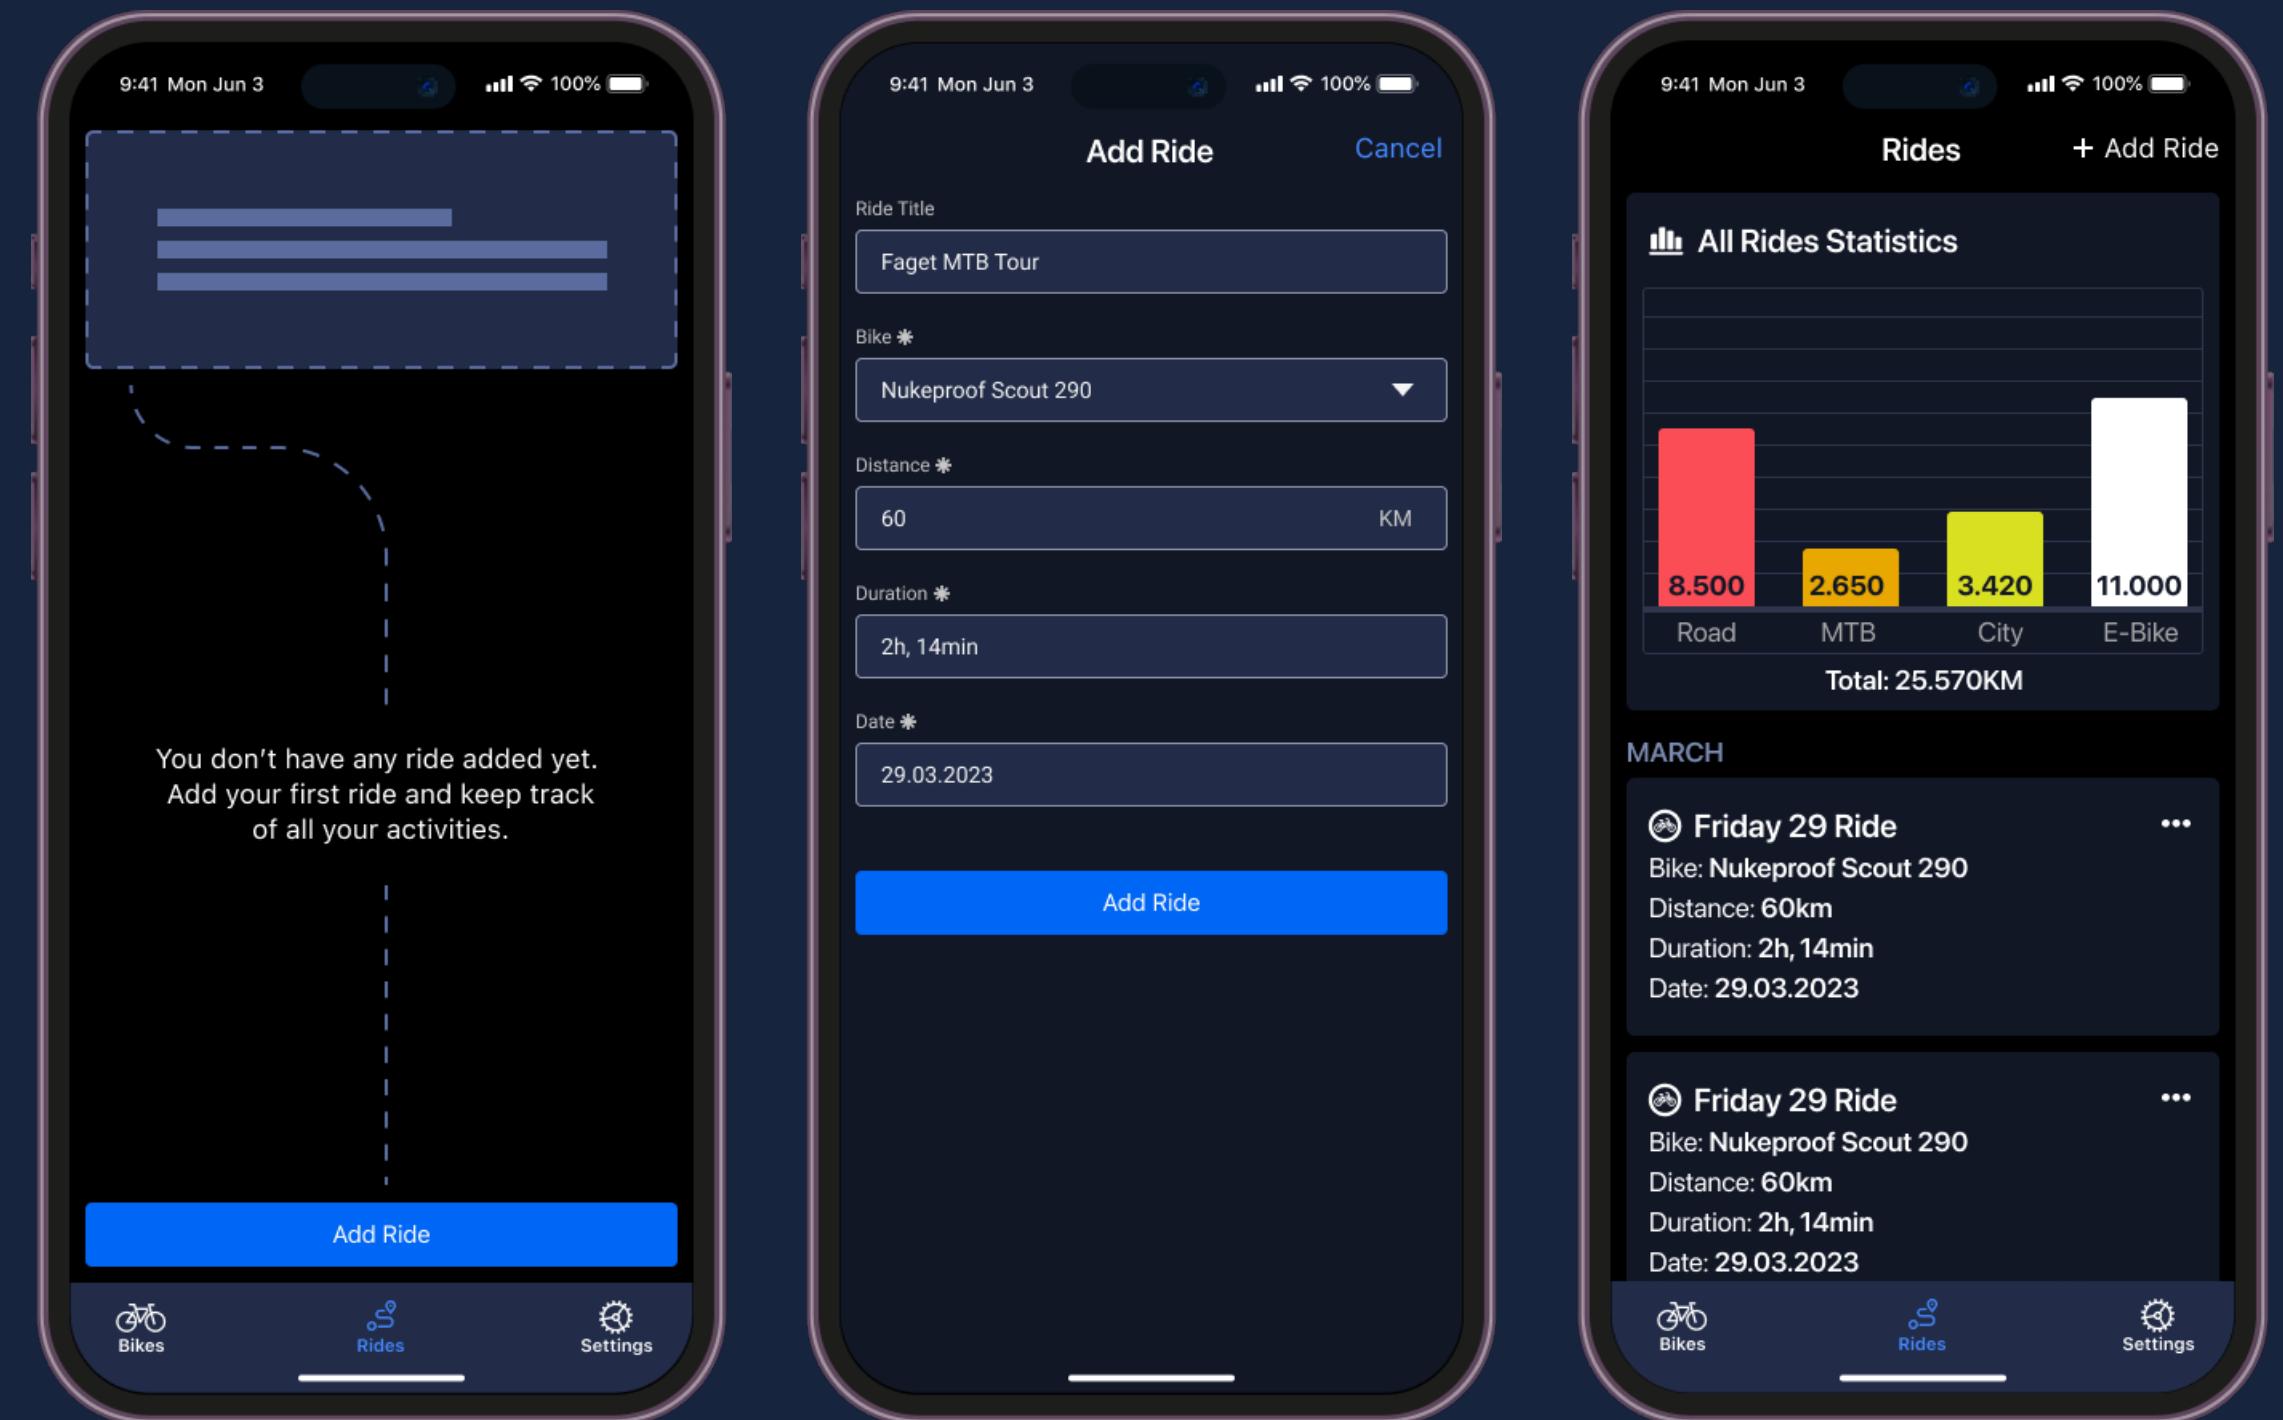

Rides

As a user I want to be able to keep track of my rides for each individual bike and view total rides statistics.

For each individual ride I want to be able to

- select one of my bikes
- add ride title, distance, duration and date
- edit rides retroactively

Settings

- As a user I want to be able to chose distance units - km/mi.
- As a user I want to be able to set a service reminder - default is 100km.
- As a user I want to be able to set a default bike by choosing it from the bikes I've previously added in the "Bikes" screen.

Bikes

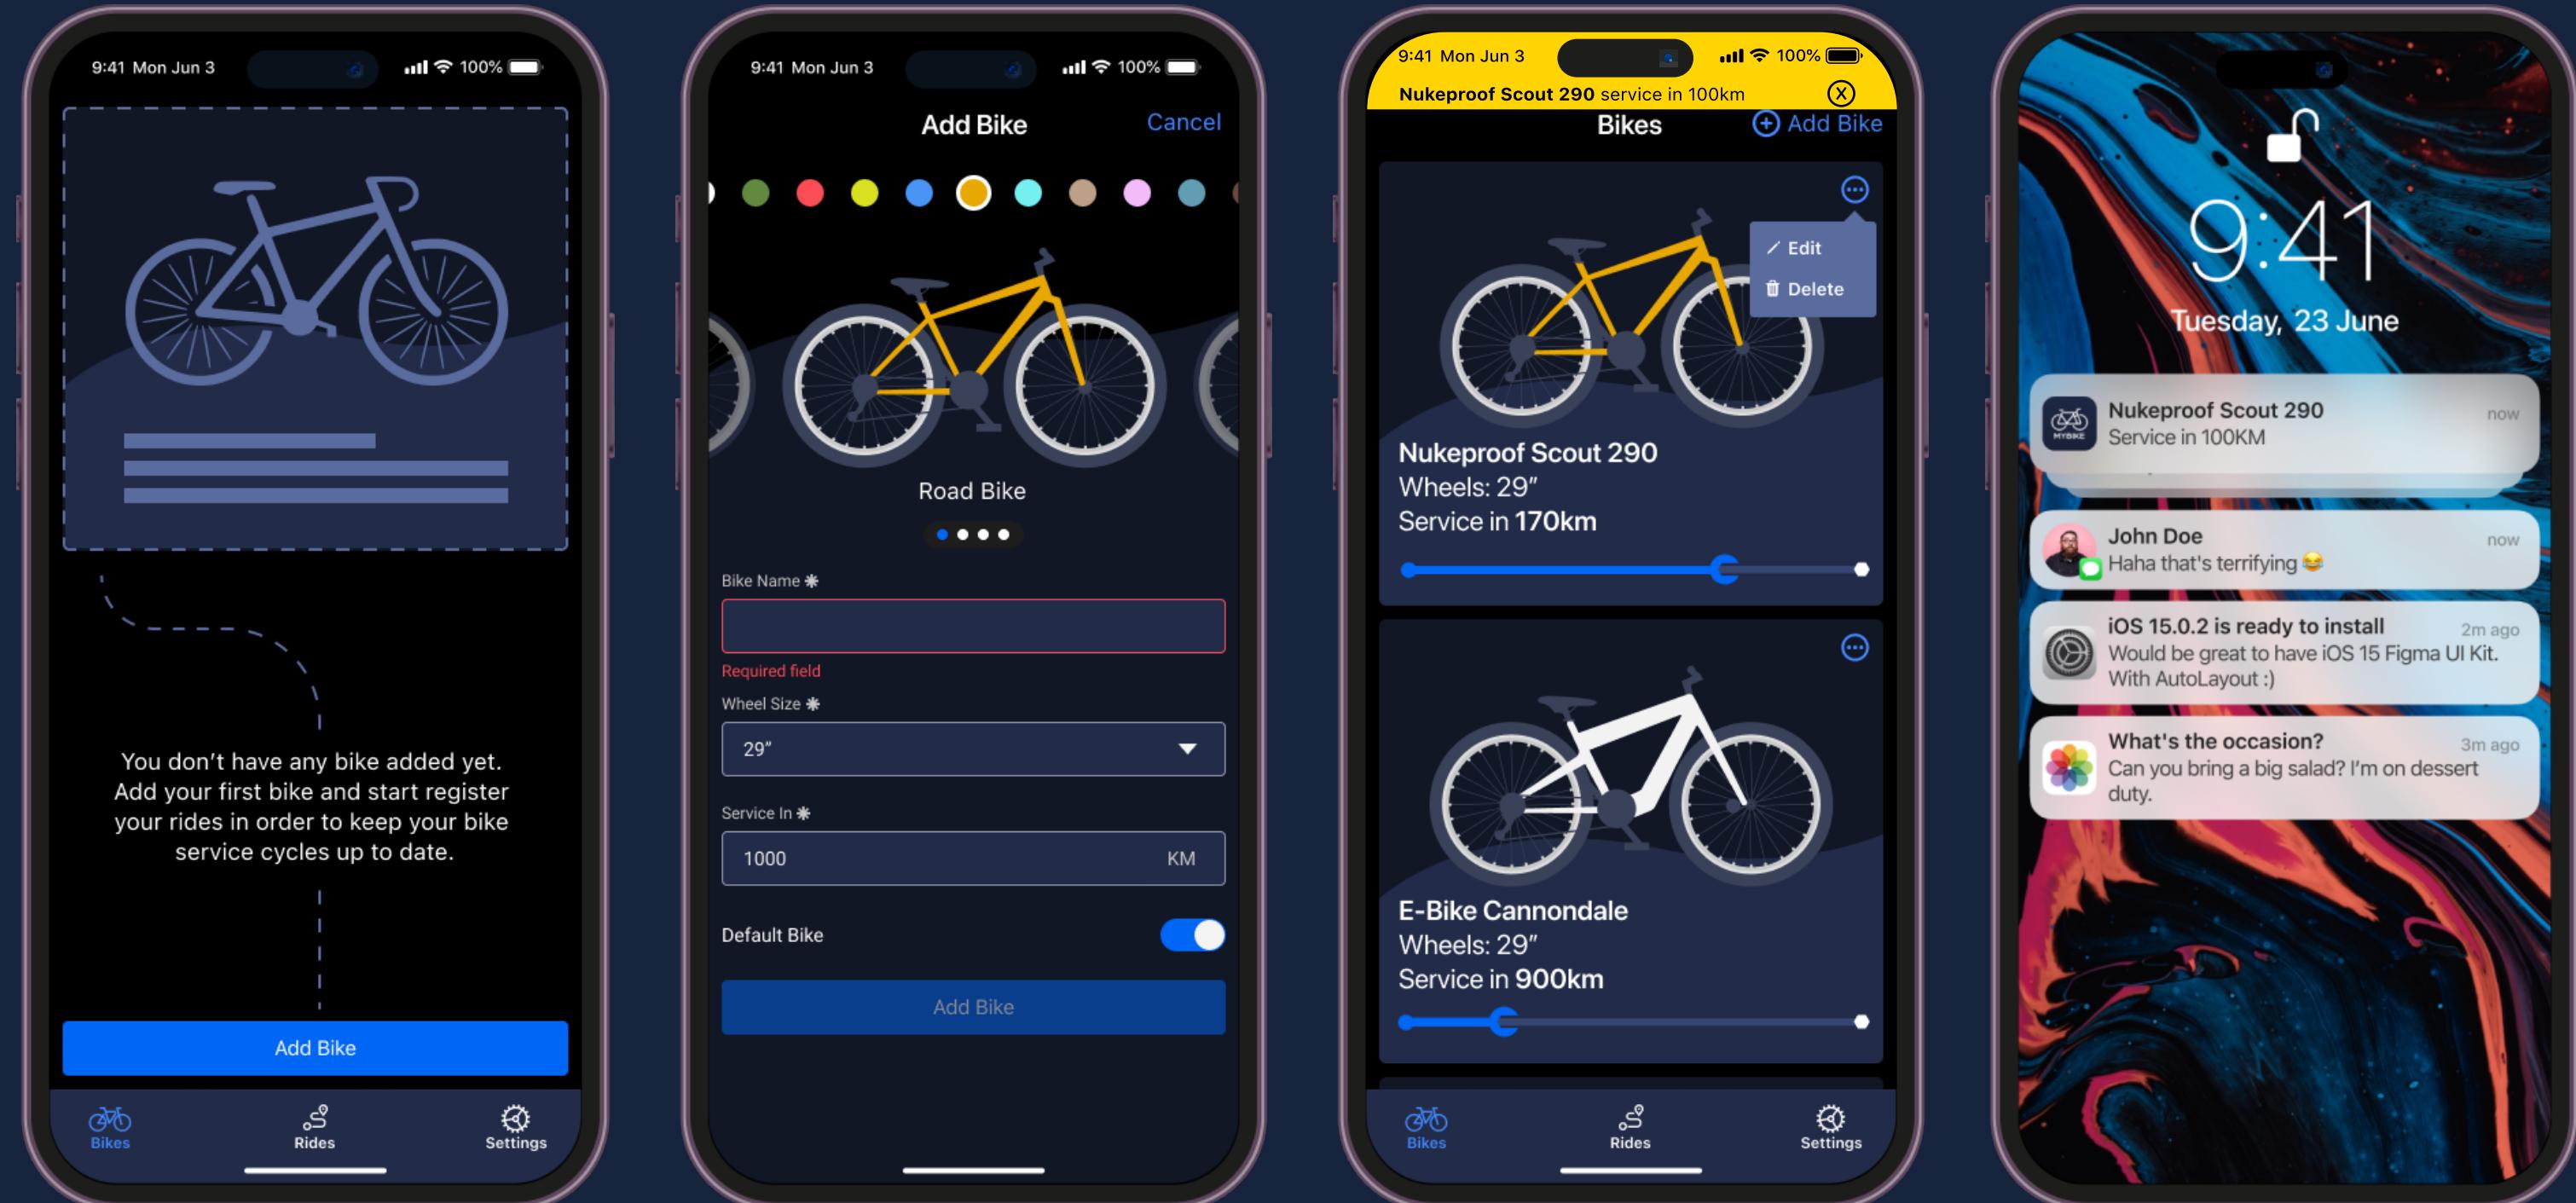

As a user I want to be able to keep track of my bikes' maintenance intervals and make sure they're in good condition.

I want to be able to define multiple bikes and customize them by

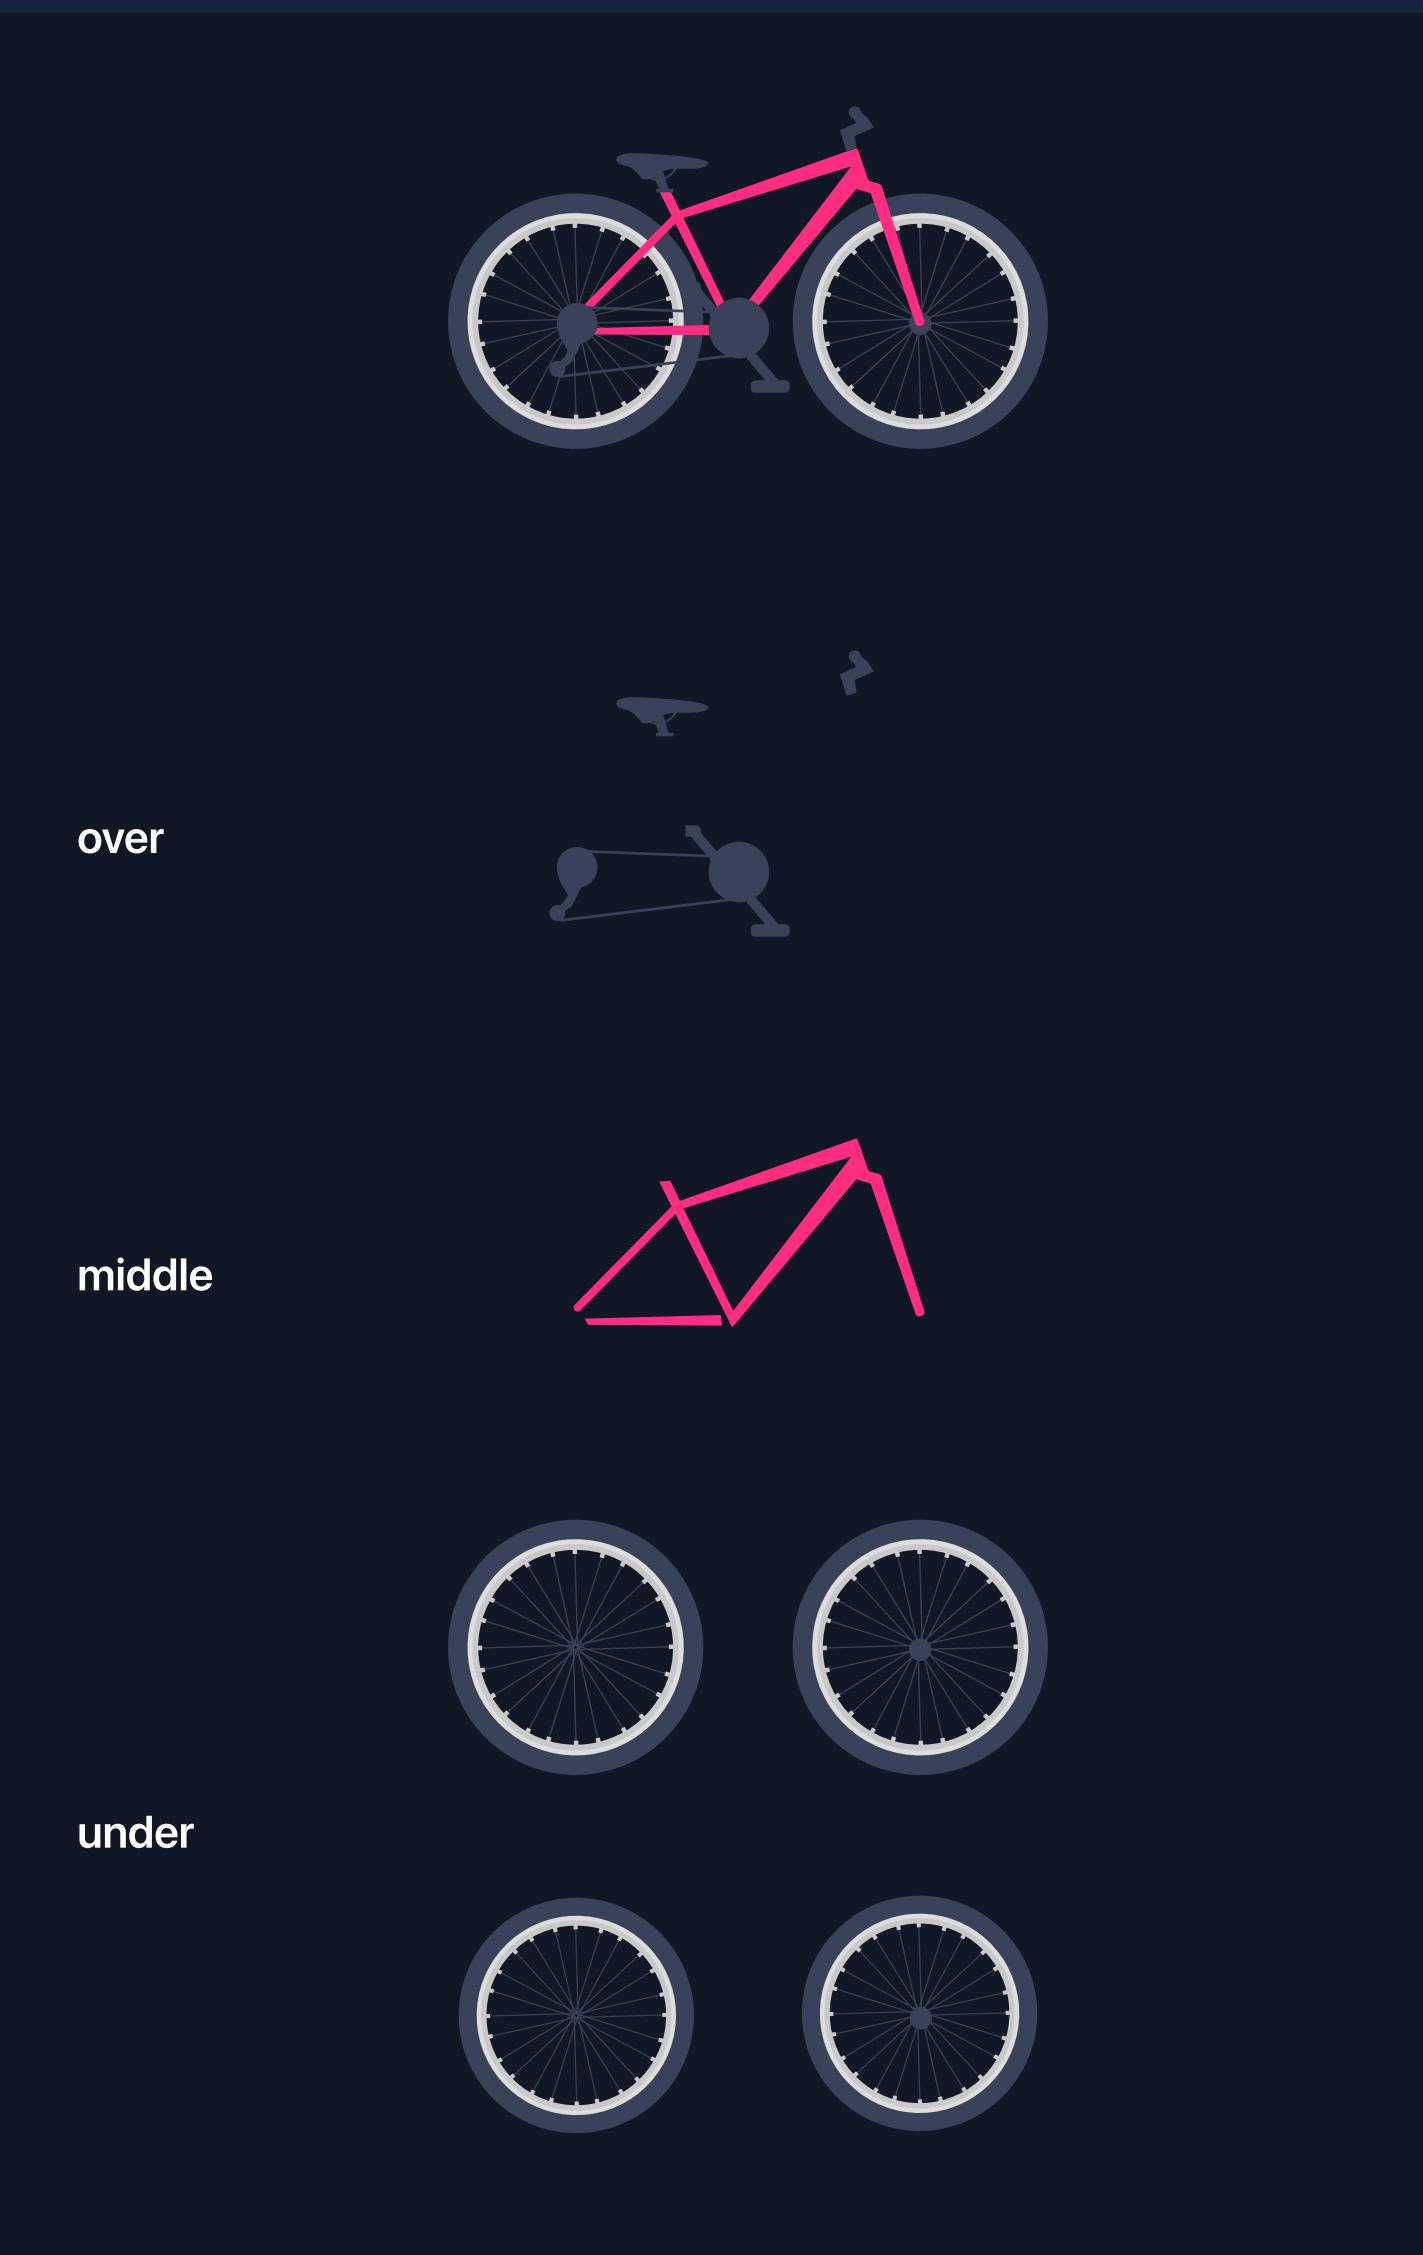

- adding name
- visually chose a type of bicycle from the 4 types available by swiping
- selecting wheel size
- selecting a color from a set of x colors
- add a number of km until service is due
- set a bike as a default bike

As a user I want to

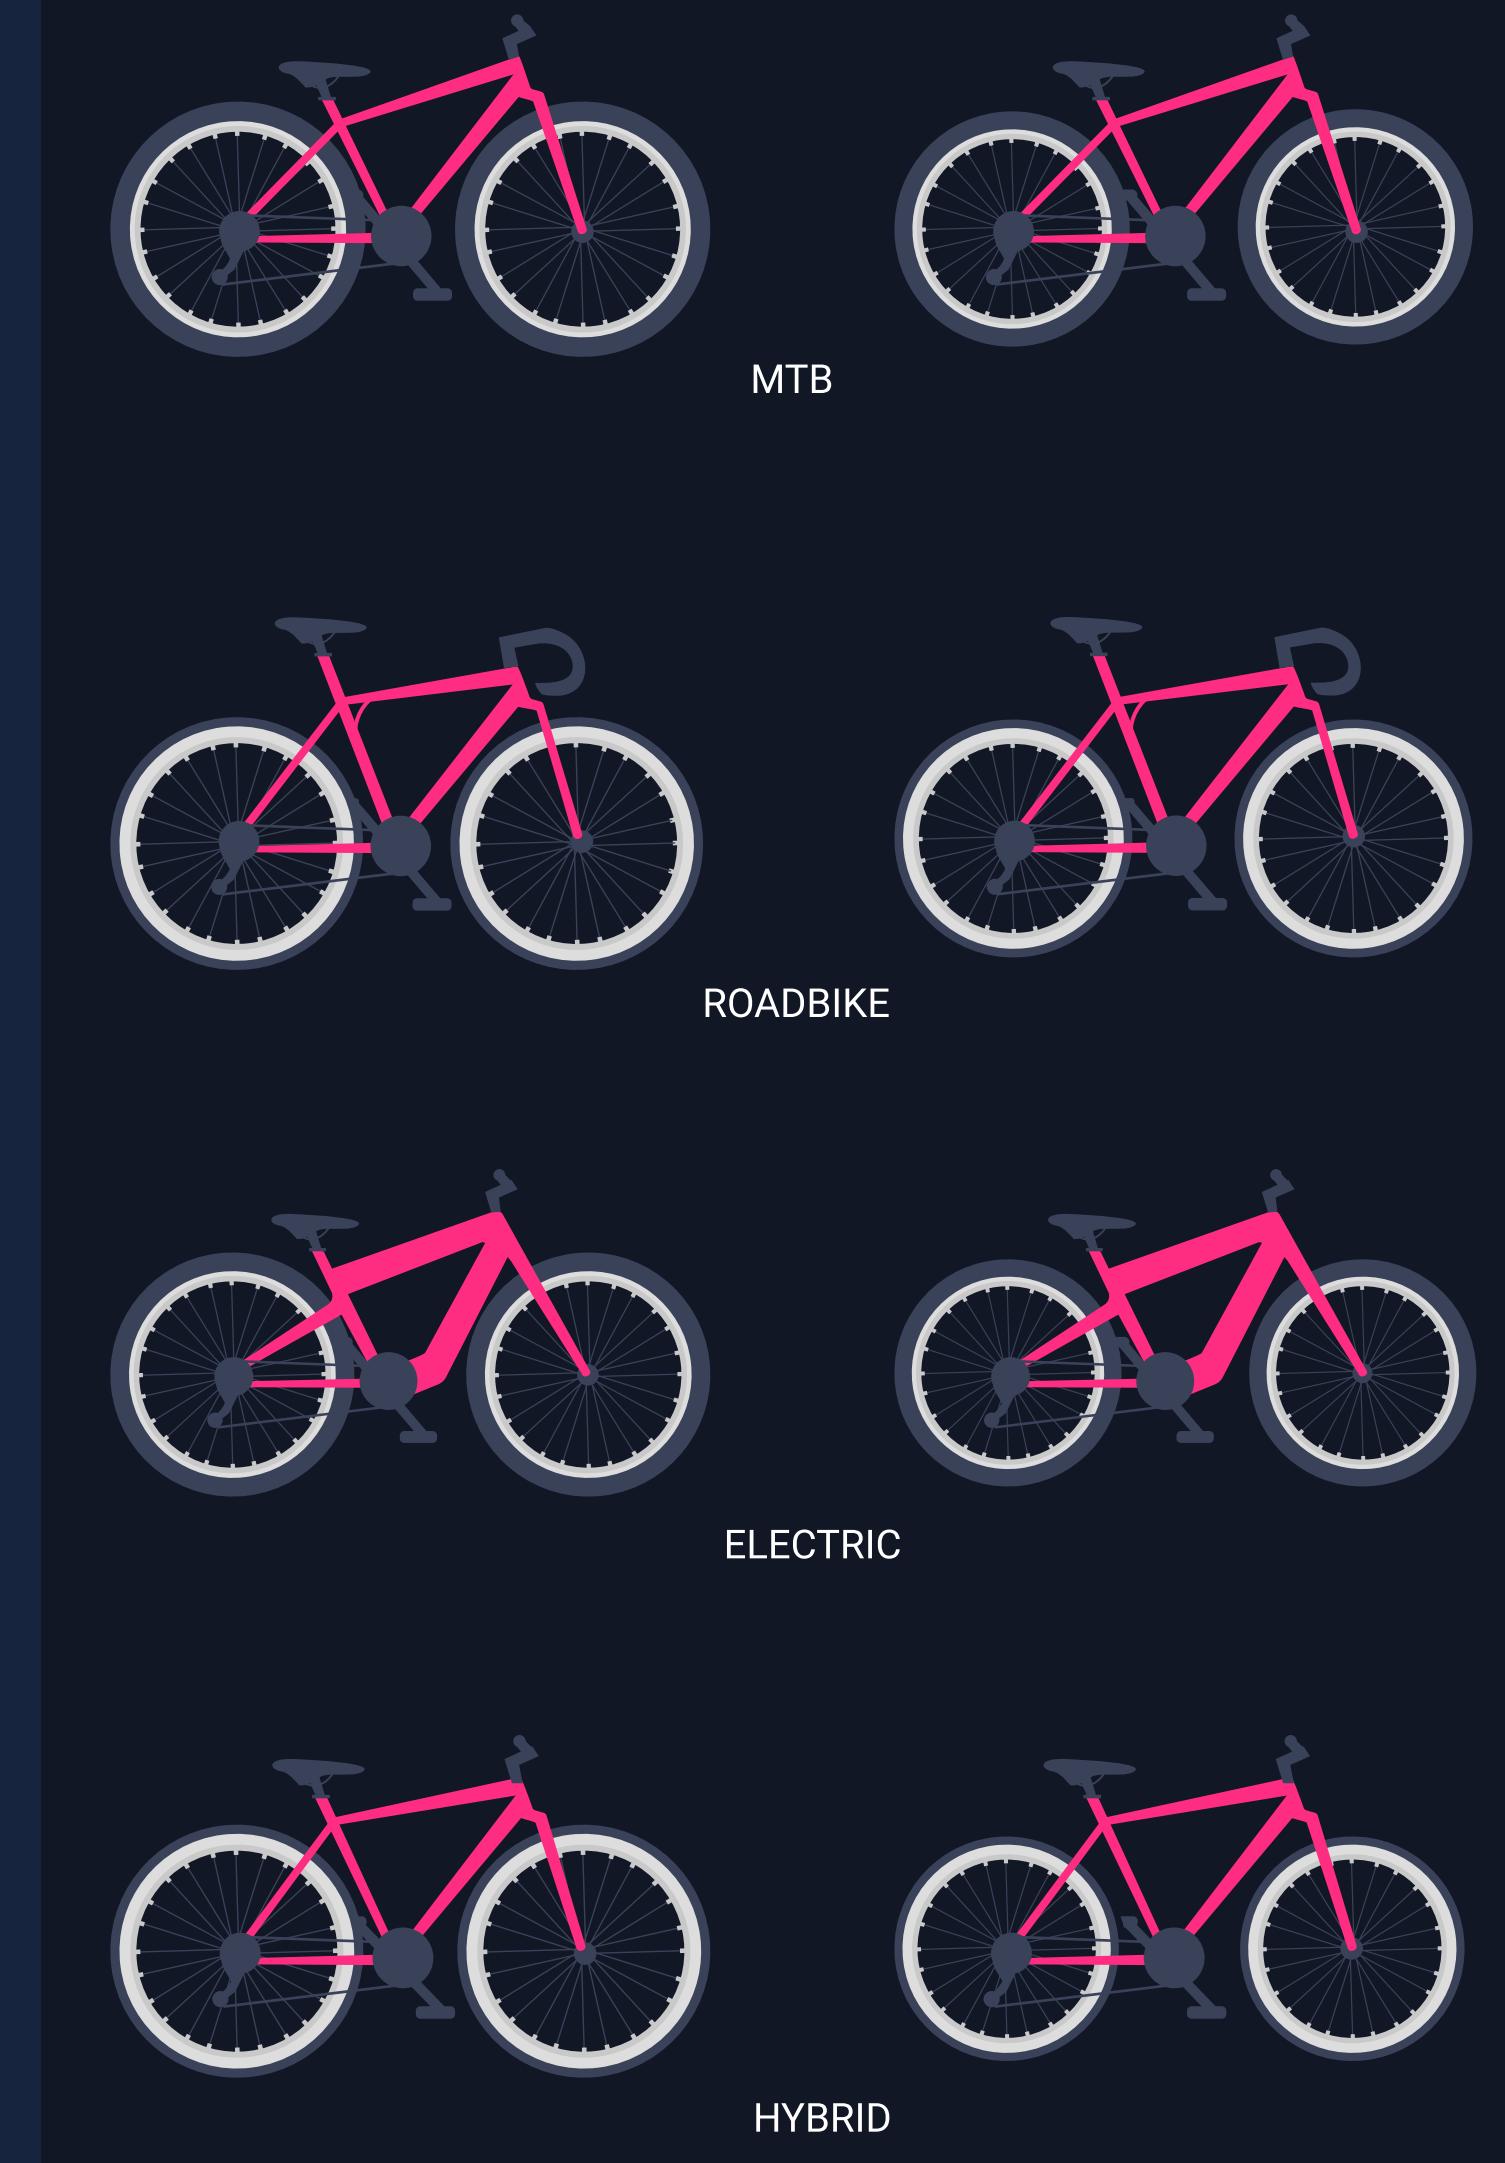

- see all my bikes on the first page when I open MyBike app
- edit or delete a bike I previously added
- receive alerts before a service interval is due based on my settings
